TODAY'S FUTURE

Future is
The child of today . .

A child conceived
From today's dream
Budding from
knowledge
Gained from
yesterday.

Future's birth arises
From today's labor,
Deftly guided by
The hands of
yesterday.

So, let today's
dreams
Be unclouded visions
Of noble quests
Untrammelled by
doubt—

Quests born out of
Today's impassioned
efforts.

HORIZON'S STAFF

Michele Edwards, *Editor*

Monica BaSaing, *Layout*

Sophia G. Facey, *Writer*

Tyra Holland, *Photographer*

Marianne Fauzer, *Photographer*

The yearbook staff for this year is extremely special. The production of the 1991 *Horizons* yearbook has been a great challenge. Undoubtedly, there are numerous problems in organizing a yearbook, such as frantically searching for twenty-four misplaced photographs for a lay-out in order to meet the next-day deadline or finding out the film will not be back in enough time to meet another deadline. Nevertheless, the staff nobly faces each challenge and achieve its goal: *Horizons 1991*

This yearbook could not have been a success without the dedicated yearbook staff Michele, Sophia, Monica, Tyra, Marianne, and Rebecca committing to deadlines.

We would like to thank the faculty for putting up with scheduling and interruptions, Linda from public affairs, the administration for their cooperation. To all of you, we say "Thank you!"

For the encouragement and support we received from Steven Anderson and Phil Klien from Jostens Printing and Publishing helped us to see the light at the end of the tunnel, we would like to say a special "Thank you!"

The yearbook staff hopes everyone enjoys the fond memories of Hahnemann University.

CARDIOVASCULAR PERFUSION

Cardiovascular Perfusion Technology Program is to provide students with a firm foundation in the medical sciences; this foundation will solidify their clinical training, serve their professional practice and facilitate allied health career transitions. The program is designed to provide students with the opportunities to become competent in the area of perfusion technology. Assist the community in matters relating to the field of perfusion technology by contributing expertise and services as needed.

PROGRAM DIRECTOR

Jason Freed, B.S.C.C.P.
Program Director

UNDERCLASSMEN

Emergency Medical Services

Hahnemann's EMS program is a multi-tiered program that meets a variety of needs in the field of emergency medicine. Some of the program objectives are to prepare students entering the program to provide competent clinical prehospital care to those with illness or injury.

Students masters skills and concepts essential to the coordination and management of EMS systems and EMS agencies.

To teach students to interact effectively with other health care professionals and patients.

To encourage analysis among students, faculty and community agencies of the important public policy issues confronting both prehospital emergency medical services and the emerging network of EMS systems.

To provide a combination of theoretical and practical experiences and knowledge, thereby affording increased opportunities for career advancement.

To provide an educational foundation to enable successful graduate level endeavors.

HUMANITIES, SOCIAL SCIENCES & BIOMETRICS

Health Sciences and Society is a program that offers a curriculum which integrates the natural sciences with the social sciences, and those two disciplines with the humanities and the arts. The curriculum is designed to ensure that the student will be exposed to different career paths within the vast and changing health care industry.

Humanities and Social Sciences are an integral ingredient to each curriculum in the allied health sciences. Through these disciplines the student is made aware of the richness and complexity of the person who will take on the role of client or patient. Literature, philosophy, and religion address questions of the nature of persons. History, psychology, and sociology place the individual in the context of society. Both disciplines are necessary components in offering the student a comprehensive picture of the individuals with whom they will interact as the student assumes his or her professional role in one of the allied health sciences.

Health Education and Related Training (HEART) is a program created for educationally disadvantaged students. It is a decelerated 3-year Associate Degree program. After successfully completing this program, the students may move into a 2-year curriculum for an Associate Degree. HEART introduces students to the health sciences professions. It provides courses in English, math, computers and the sciences. It provides academic assistance throughout the courses and prepares students for further education as health care practitioners.

Dr. Martin Luther King Jr. Day

Hahnemann celebrated Dr. Martin Luther King Jr.'s birthday for the first time this year. Hahnemann's decision to observe Dr. Martin Luther King Jr.'s birthday as a legal holiday for all employees, staff and students was a first in Philadelphia.

The day long celebration was held on Tuesday, January 15, 1991 with numerous events including a complimentary breakfast, audiovisual presentations of Dr. King's life, and guest speaker Therman E. Evans, M.D. Vice President and Corporate Medical Director, CIGNA Corp.

At the end of the day, keynote speaker The Honorable A. Leon Higginbotham, Jr. Chief Judge, U.S. Court of Appeals for the Third District gave a powerful speech followed by a reception hosted by President Iqbal Paroo.

MEDICAL TECHNOLOGY

The Medical Technologist is a professional member of the health care team. With the aid of microscopes and sophisticated instrumentation, the M.T. is able to examine samples of body fluids for purposes of developing data used by the physician in the maintenance of health and the diagnosis and treatment of disease.

The M.T. with a broad background in chemical and biological sciences, is educated to work in the five major areas of the clinical laboratory: Blood Bank, Chemistry, Hematology, Immunology and Microbiology.

Medical Technologists may pursue diverse career opportunities. They are employed in hospital laboratories, physicians' offices, clinics, public health agencies, pharmaceutical firms and research institutions. Choose a career in medical technology and the exploration never ends.

MENTAL HEALTH

The Mental Health Technologist is prepared to perform A diversity of tasks within service delivery in the mental health field. The technologist carries responsibilities in a degree commensurate with his/her middle level professional education, involving direct patient care and contact with the families of patients.

The associate degree program in mental health technology prepares students to meet the demanding need for qualified mental health and human services workers. These workers function as part of a team of other human services professionals (The Psychiatrist, Psychologist, Social Workers, Psychiatric Nurse ETC). In mental health and human services agencies.

The Bachelor of science program is an upper division program preparing students for mid-level positions in the mental health delivery program. Hahnemann students acquire the knowledge and skills necessary for the effective practice of psychosocial treatment related to community mental health, psychiatric rehabilitation and resocialization.

NURSING

The Associate Degree Nursing Program is a two year accelerated program combining liberal arts, science and nursing courses that include rotations. At the end of two successfully completed years, the graduate is prepared to take the State Board of Examination leading to licensing as a registered nurse. The program prepares a skilled patient-side nurse who can function on the health care team in a hospital and in the community. The Hahnemann graduate will have an in-depth grasp of concepts underlying basic health problems. The nursing process is used to plan care for patients at various stages of the life cycle when there are disruptions of health, crisis situations, and alterations in life style.

The Bachelor of Science Nursing program gives RNs who have either an associate degree or a nursing diploma the opportunity to obtain a Bachelor of Science degree. The program is built upon the knowledge base in nursing already acquired by students in their first-step programs. The focus is upon enlarging and deepening the cognitive skills of the nursing process, no repetition of foundational knowledge occurs.

PHYSICAL THERAPY ASSISTANT

The Physical Therapist Assistant Program is designed to train individuals to perform basic physical therapy procedures in accordance with an established plan of care under the supervision of a physical therapist. The graduate of an accredited physical therapist assistant educational program is eligible to take the examination for state licensure and practice as a PTA. Although several courses in the curriculum can be applied to other academic degrees, the PTAP does not intend to prepare students to enter a physical therapist educational curriculum.

MEMORIES

PHYSICIAN ASSISTANT

Physician assistants are primary health care providers who work under the supervision of a physician as vital members of the health care team.

The concept of the physician assistant is relatively new and has developed from the basic premise that many tasks performed by physicians can be carried out equal competence specially trained health professionals. Hahnemann graduates are trained to perform complete or directed history and physical exams, organize the results, evaluate tests, diagnose, or present cases in a problem oriented fashion to the supervising physician. They are also trained to carry out the therapeutic plan and counsel patients about signs and symptoms, the meaning of the diagnosis, the rationale for the effects of treatment, the prognosis, and necessary follow-up.

A physician assistant delivers patient care in a wide variety of practice settings under the supervision of a licensed physician who is responsible and legally liable for the performance of the assistant.

Hahnemaniacs

RADIOLOGY TECHNOLOGY

Radiography is the art and science of imaging the tissues, organs, bones and vessels that comprise the human body, by means of radiation.

The radiographer, at the direction of a physician, applies his/her knowledge of anatomy, physiology, positioning and radiographic techniques to accurately demonstrate anatomical structures on a radiograph or other imaging receptor. A thorough understanding of the principles of radiation protection, radiation is necessary to produce quality diagnostic images while minimizing radiation exposure to the patient. Radiographers work in a variety of settings, such as hospitals clinics, private offices, industrial and experimental laboratories and commercial sales.
